

Yield Stability

- Smooth PV system operation ensured
- Early error detection
- Yield optimization via environmental analyses¹

Time Saving

- Complete inverter monitoring by SMA
- Fewer service calls for initial diagnostics
- Faster response times

Professional Support

- More effective service calls thanks to on-hand data
- Fast solutions provide system operators with security
- Proactively managed service intervals¹

Transparency

- Regular reporting on system events
- Increased customer satisfaction thanks to a proactive approach
- Calculation of the system's performance ratio^{1,2}

SMA REMOTE SERVICE

Always on the safe side

With SMA Remote Service³, SMA controls an inverter's function via remote monitoring. System operators can thus rest easy with the knowledge that their PV systems will run continuously and without any disturbance, and that they will be able to protect themselves from unforeseen system failures preventing possible yield losses. As soon as our system reports an irregularity, we get in touch with the system operator's contact person. This also allows us to work together in ensuring even faster response times for service calls, since the relevant data has already been analyzed. SMA is your partner for proactive and comprehensive service.

¹ Expected availability in 2014

² A prerequisite for this service is use of a multimeter (e.g., the Sunny SensorBox).

³ Please note that a SMA data logger, for example a Sunny WebBox, an uninterrupted connection to the Internet and a fixed public IP address is required for the use of SMA Remote Service.

OUR SERVICES

SMA provides complete inverter monitoring. Here, our experts have an eye on all system parameters and detect irregularities immediately. If a service call is required, we get in touch with the contact person and provide sound solutions. As a result, the PV system goes back into operation as quickly as possible.

- Complete, almost real-time, inverter monitoring¹
- Contact by telephone within four hours²
- Error pattern analysis by SMA Service Line experts
- Development of recommended solution
- Proactive planning of service intervals³
- Individual environmental analysis for yield optimization³

ADVANTAGES

- Preferential treatment during service calls
- Professional error diagnostics and recommended solutions
- Transparency through reporting
- Direct contact with SMA Service Line experts
- Optimized PV system capacity

CONTRACT MODELS

Our customers can sign SMA Remote Service contracts at any time for a minimum term of one year.

FUTURE PROSPECTS

In order to prevent system failures, SMA offers proactive service at planned intervals and provides additional support in optimizing yields via environmental analyses in the future.

COMBINED WITH THE SMA WARRANTY EXTENSION

SMA offers comprehensive service by combining SMA Remote Service and the SMA warranty extension Comfort. Should service assistance be required, both the replacement device and support on-site are naturally free of charge during the warranty period.
